Swing door operators in modular design
Swing door operators in modular design

With their ED 100 and ED 250 swing door operators, DORMA offers electro-mechanical swing door operators for various fields of application. Simply select the suitable version according to your prevailing door-leaf width and weight: While the ED 100 is suitable for doors with a weight of up to 100 kg and a door width of 1,100 mm, the ED 250 is designed for doors with a width of 1,600 mm or a door weight of 250 kg. Both operators may be installed as push-version with standard arm and as pull-version with slide channel.

Apart from the extended cover, DORMA also provides an easy-to-install integrated door coordinator. With the aid of the DORMA Upgrade Card, the system’s functional range may be adapted to various door versions. The large scope of integrated functions furthermore ensures that the majority of possible applications may easily be realised.

Benefits:
- Flexible configuration: Customers only pay for the functions they actually require.
- Cheap transport and easy mounting thanks to the system’s reduced weight.
- Low-noise application due to multi-stage gear.
- Elegant visual appearance: DORMA Contur design provides an operator height of only 70 mm.
- Various functions as standard.

Fields of application:
- For single- or double-leaf swing doors. Choose between the ED 100 and the ED 250 in accordance with your prevailing door-leaf width and weight.
- The pull-version with slide channel and the push-version with standard arm are suitable for application at fire and smoke doors.
- Thanks to its low- and full-energy version, the system is suitable to automate both rarely and heavily frequented internal and external doors.
- High torque for full-automatic swing doors with radar motion control.
- For interior and exterior doors.
**Required operating conditions**
- Ambient temperature: –15 to +50 °C
- Only suitable for dry environments
- Power supply: 230 V AC 50 Hz +/- 10%
- Class of protection: IP 20

**General specifications**
- Dimensions (W x H x D): 685 x 70 x 130 mm
- Min. clearance between hinges (double-leaf systems): 1,400 mm
- Min. clearance between hinges for ESR (double-leaf systems): 1,450 mm
- Weight of single-leaf version: 12 kg
- Power supply for external accessories: 24 V DC +/- 10%, 1.5 A
- Opening angle: Max. 110°

**Integrated functions**
- Hold-open time: 30 s, 180 s (optional)
- Blocking behaviour: Reversing/Door closer function
- Locking feedback contact: Motor lock
- Wind load control: up to 150 N
- Voltage-independent braking circuit: Adjustable via potentiometer
- Electronic latching action pulse: Force adjustable
- LED status indicator:
  - green: Operating voltage indicator
  - red: Malfunction indicator
  - yellow: Service interval indicator
- Integrated program switch:
  - OFF
  - AUTOMATIC
  - PERMANENT OPEN
  - EXIT ONLY (only for single-leaf systems)
- User interface with information display: Status indicator and parameterisation
- Slot for DORMA Upgrade Cards: Extension of functional range
- Update interface: Firmware update
- TMP – Temperature Management Program: Temperature-related overload protection
- IDC – Initial Drive Control: Driving phase optimisation
- Cycle counter: 0 – 1,000,000 (reasonably subdivided)
- Power Assist Funktion: Servo-supported when opened manually
- Push & Go Function: Door opens when moved manually by 4°

**Inputs, terminals max. 1.5 mm²**
- Potential-free activator: Inside and outside (NO contact)
- Energised activator: 8 – 24 V DC/AC + 10%
- Night-/Bank (key switch): NO contact/NC contact
- Safety sensor: Hinge side and opposite hinge side (NC contact)
- Test signal for safety sensor: Hinge side and opposite hinge side
- Emergency-Off pushbutton/ Lock switch: NC contact/NO contact

**Outputs, terminals max. 1.5 mm²**
- Potential-free door status contact, alternatively:
  - Door closed
  - Door open
  - Malfunction

**Inputs, terminals max. 1.5 mm²**

**ED 100**
- Max. power consumption: 120 Watts
- Closing force EN 1154: EN 2–4, adjustable
- Max. door-leaf weight for lintel depths of up to 300 mm: 100 kg
- Door-leaf width: 700–1,100 mm
- Max. opening speed: **50° (27°*)/second**
- Max. closing speed: **50° (27°*)/second**
- Axle extension: 30/60 mm
- Lintel depth for slide channel: +/- 30 mm
- Lintel depth for standard arm: 0–300 mm

**ED 250**
- Max. power consumption: 240 Watts
- Closing force EN 4-6, adjustable
- Max. door-leaf weight for lintel depths of up to 300 mm: 250 kg to 1,400 mm
- Door-leaf width: 190 kg for 1,600 mm
- Door-leaf width: 160 kg
- Max. door-leaf weight for lintel depths from 301 mm to 500 mm: 190 kg for 1,600 mm
- Door-leaf width: 160 kg
- Door-leaf width: 700–1,100 mm
- Door-leaf width for fire protection doors: 700 – 1,400 mm
- Max. opening speed: 60° (27°*)/second
- Max. closing speed: 60° (27°*)/second
- Axle extension: 30/60/90 mm
- Lintel depth for slide channel: +/- 30 mm
- Lintel depth for standard arm: 0 – 500 mm

* The values in brackets indicate the maximum speed in Low-Energy Mode without Full-Energy or Fire Protection Upgrade Card.

** Depending on the door leaf weight, it is limited automatically in accordance with DIN 18650, BS 7036-4 and ANSI 156.19.

</tbody>
</table>

**FE** = With Full-Energy or Fire Protection Upgrade Card,  **LE** = Low-Energy standard operator without upgrade card

* Power-Assist Function is adjusted to maximum (function is activated at approx. 3° opening width)

** The torque is activated by an automatic opening in AUTOMATIC mode.

### Door closer mode & AUTOMATIC mode

Users may choose between two operation modes: door closer and AUTOMATIC mode. While adjusted to door closer mode (parameter Hd = 1), the system is optimised for manual operation. With its optional Power-Assist Function, the door closer mode is tailored to predominantly manually-operated doors where a door closer function is desired. The AUTOMATIC mode (parameter Hd = 0) in turn is especially suitable for mainly automatic access via motion detector or push-button. In addition, the door reverses as soon as it runs into an obstruction while closing. On activation of the AUTOMATIC mode, also the wind load control is available. Although in AUTOMATIC mode, the doors are still ready for manual access. In this case we would recommend the Push & Go function.

### Wind load control

**ED 100** and **ED 250** operators are especially suitable for application at exterior doors that are subject to varying wind loads and for interior doors separating rooms where different pressure prevails. While the system is in AUTOMATIC mode, the wind load control monitors the driving speed and adjusts the speed correspondingly if it exceeds or falls below the adjusted value. In conjunction with the Full-Energy Upgrade Card, the operator provides a force of up to 150 N at the main closing edge – which is then used to compensate environmental influences. The electronic latching action is activated during the last 5° of the closing cycle in order to support the closing action.

### Power-Assist Function

The Power-Assist Function may be activated while the door is in door closer mode (parameter Hd = 1). As soon as a user opens the door by some degrees, the servo-function supports the manual opening cycle. In addition, the servo support automatically adapts to the adjusted size of the door closer. The level of servo support is adjustable in order to meet the requirements of DIN 18040, DIN Spec 1104, CEN/TR 15894, BS 8300/2100 and document “M”, even up to class EN 6. The smallest adjustable opening torque amounts to 23 Nm/5 lbf - unless the hold-open device is triggered or in the event of a power failure. With the aid of the Power-Assist Function, the system meets the requirements of the European standard EN 1154 and provides barrier-free access during standard operation. However, it is not possible to use the system in conjunction with the Push & Go Function or the wind load control as these functions may affect the easy manual opening of the door.

Covers

The operator covers are packed separately from the operator system, which makes it easy to select the respectively required cover. DORMA provides covers for single- and double-leaf systems. All covers are designed for on-site mounting and realised in DORMA Contur design. They are furthermore suitable for both the ED 100 and the ED 250 version. When creating double-leaf systems, the four-position internal program switch has to be replaced by a three-position switch, which means that the EXIT ONLY function is only available in combination with the external program switch. Double-leaf systems are required for doors where the clearance between the hinges exceeds 1,400 mm (1,450 mm with ESR).

ED VARIO cover

![ED VARIO cover](image)

This aluminium cover is designed to create a continuous cover for double-leaf swing door systems. In addition to the VARIO cover, you will require two ED BASIC covers, which are mounted on the right and on the left of the operator system. The ED VARIO cover is designed to hide the gap between the two covers and may be sawed to the appropriate size on site. With the aid of the VARIO cover, you may also increase the length of single-leaf operators. The cover may be installed on the left or on the right side and can be sawed to the appropriate size on site.

DORMA Upgrade Cards

DORMA Upgrade Cards are designed to increase the functional range of our swing door operators. The installation of the cards is very easy: Just insert the respective Upgrade Card into the proper slot at the control unit and the software will be transferred automatically. DORMA offers different Upgrade Cards, which may either be combined or installed as individual components. Please note that the respective function of the Upgrade Card is only available as long as the card is connected to the control unit.

Upgrade Card Full-Energy – blue

All operator systems are supplied as Low-Energy version, which means that the adjustable opening and closing speed range is restricted to a certain limit. The respective limits depend on the prevailing door-leaf width and door-leaf weight and may vary between 1° and 27° per second. These limits furthermore comply with DIN 18650 (German Industrial Standard), ANSI 156.19 (American Standard) and BS 7036 (British Standard). Depending on their field of application, such swing door operators might not require safety sensors when operated in Low-Energy Mode. If you need a higher driving speed, you will require the respective Full-Energy Upgrade Card. The driving speed may then be increased to a maximum of 50°/second with the ED 100 and to 60°/second with the ED 250. In this case the swing path has to be monitored by safety sensors (mounted onto the door leaf).

Recommended weight/dimensions for the installation of the Full-Energy Upgrade Card

ED PROFESSIONAL cover

This aluminium cover is designed to create double-leaf swing door systems. The ED PROFESSIONAL cover is a continuous and seamless cover and available in lengths from 1,400 mm (1,450 mm with ESR) to 3,200 mm. With the PROFESSIONAL cover, also single-leaf operators may be extended to a length of up to 3,000 mm towards the main closing edge.

DORMA Upgrade Cards

DORMA Upgrade Cards are designed to increase the functional range of our swing door operators. The installation of the cards is very easy: Just insert the respective Upgrade Card into the proper slot at the control unit and the software will be transferred automatically. DORMA offers different Upgrade Cards, which may either be combined or installed as individual components. Please note that the respective function of the Upgrade Card is only available as long as the card is connected to the control unit.

DORMA offers different Upgrade Cards, which may either be combined or installed as individual components. Please note that the respective function of the Upgrade Card is only available as long as the card is connected to the control unit.

Upgrade Card Full-Energy – blue

All operator systems are supplied as Low-Energy version, which means that the adjustable opening and closing speed range is restricted to a certain limit. The respective limits depend on the prevailing door-leaf width and door-leaf weight and may vary between 1° and 27° per second. These limits furthermore comply with DIN 18650 (German Industrial Standard), ANSI 156.19 (American Standard) and BS 7036 (British Standard). Depending on their field of application, such swing door operators might not require safety sensors when operated in Low-Energy Mode. If you need a higher driving speed, you will require the respective Full-Energy Upgrade Card. The driving speed may then be increased to a maximum of 50°/second with the ED 100 and to 60°/second with the ED 250. In this case the swing path has to be monitored by safety sensors (mounted onto the door leaf).

Recommended weight/dimensions for the installation of the Full-Energy Upgrade Card
When the ED 100 is installed at fire and smoke doors with application in preventive fire protection, the Upgrade Card Fire Protection is required for compliance with the guidelines for hold-open devices. Apart from its smoke detector connection (as monitored current loop), the card also offers a manual reset function (by opening the door), a full-energy function and the system may be triggered at the door leaf.

Thanks to the card’s integrated full-energy function, no additional Full-Energy Upgrade Card is required.

**Manual reset by opening the door**
A triggered hold-open system has to be reactivated manually. As soon as the function has been activated, it suffices to open the door until it has almost reached the adjusted opening width.

**Triggering at door leaf**
It must be possible to trigger a hold-open device manually in order to close the door. With ED 100 & ED 250, users may deactivate the hold-open function by a slight push against the door leaf. So no pushbutton is required to trigger a closing cycle; however, it is still available as an option.

The Upgrade Card DCW provides the operator with a DCW Bus connection. The integrated DCW driver supports the following accessory:

- **Emergency exit motor lock with self-locking action**

  DORMA SVP DCW

  The required procedure is controlled by the operator while the operator and the motor lock communicate via the DCW bus.

  - **ST 32 DCW**

    The key switch to trigger the Night-/Bank function is suitable for application as activator outside the secured area (if you turn the key clockwise).

    When the key switch is used in conjunction with the DCW program switch: the program switch is adjusted to OFF by turning the key counter-clockwise in order to deny access after closing of business or during work breaks. Turn the key to the right for more than 3 seconds in order to trigger the AUTOMATIC function.*

- **Nurse-Bed-Function** (only for double-leaf door systems)

  As soon as a pulse is triggered, both door leaves of the double-leaf system will open.

  Sometimes this may not be necessary, as the full passage width is not required.

  Whenever this is the case, the Nurse-Bed-Function is perfectly suitable to control the two door leaves separately.

  The activator that is connected to the external detector only institutes the active door leaf to open.

  The other activator (the one that is connected to the internal detector) is used to open the door to the full opening width.

  In this case, both door leaves open so that the full passage width is accessible.

  This function reduces the energy consumption and may help to avoid draughts and thus heat loss.

* Depending on regional standards, provisions and regulations regarding the safeguarding of buildings, further measures to shut off the building may be required.
With the aid of the upgrade card, the required special functions are allocated to the in- and outputs of the control unit to facilitate the connection of the respective components.

**System overview**
The system requires an electric strike, a motor lock or similar devices to keep the door closed. Furthermore, the door is equipped with a lever handle on the inside and a knob on the outside so that the door may only be opened from the inside and the outside with the corresponding key. In addition, large-surface pushbuttons are installed on the inside and on the outside of the toilet while a status indicator (vacant/occupied) on the outside and an occupied light indicator on the inside of the toilet indicate the current status. As an option, we provide an emergency push-button (to be mounted on the outside), which allows to open the door immediately in the event of an emergency. Please note that DORMA recommends connecting the barrier-free toilet to an additional emergency call system (by others).

**Functional characteristics**

**– Entering the barrier-free toilet**
While the toilet is vacant, the status indicator on the outside is green. Use the pushbutton on the outside to trigger an automatic opening cycle. The door will close automatically on expiry of the adjusted hold-open time. As soon as the door is fully closed, users may deactivate the external pushbutton via the pushbutton on the inside so that the door is no longer accessible from the outside. At the same time, the external status indicator switches from green to red in order to indicate that the toilet is occupied. Also the internal status indicator turns red to show the user inside the toilet that the door is now locked.

**– Leaving the barrier-free toilet**
Users may open the door either automatically via the internal pushbutton or manually by using the lever handle. At the same time, the system emits a 24 V DC message, which may be used to flush the toilet automatically. The door closes on expiry of the adjusted hold-open time. The status indicator on the outside switches from red to green and the light indicator on the inside goes out as soon as the door has reached its “closed” position.

**– Emergency opening from the outside**
The system is ready for connection of an emergency pushbutton so that, in the event of an emergency, users may deactivate the locking function and the door can only be opened by hand. In this case the door no longer operates automatically. As an alternative, the door may be opened with the aid of a key from the outside (in the event of an emergency). In both cases, the status indicator on the outside switches from red to green and the light indicator on the inside goes out.
**Functional characteristics**

In the event of a fire, the ceiling-mounted or lintel-mounted smoke detectors detect emitted smoke and deactivate the automatic opening of the door. In this case, the operator will close the door via the integrated spring and can no longer open it automatically. Apart from the automatic activation via smoke detector, the system may also be triggered manually via the optional manual release pushbutton or when the door is closed by hand. In order to reactivate the system, the door has to be opened manually.

**ESR – Integrated door coordinator**

The ESR set is installed inside the double-leaf operator on site. It is available as individual component and easy to install. The system works similar to a drum brake and thereby ensures the proper functioning of the system. Its brake works on the motor shaft of the operator on the active door leaf and transfers the switching signal via a shaft. The system does not require any maintenance.

ED 100/ED 250, double-leaf doors

ED 100/ED 250, single-leaf doors, barrier-free toilet
**Program switches**

External program switches are available in different designs and have been conceived for all kinds of demands. They offer various options, from a mechanical to a full-electronic version, alternatively also lockable via Euro profile half-cylinder or in a full-electronic way via code. These switches are designed to replace the internal program switch.

### Mechanical

**Program switch**

- 4-position, aluminium, white, flush-mounted version, Gira S-Color
- Article No. 19135404150
- Box for surface-mounting: 5080531332

### Mechanical and lockable

**Program switch**

- 4-position, lockable, aluminium, white, flush-mounted version, Gira S-Color
- Article No. 19135604150
- Box for surface-mounting: 5080531332

### Electronic

**Full-electronic program switch**

- In System 55 design, 4-position, lockable via code or additional TL-ST S55 key switch, membrane keypad, aluminium-coloured, white, flush-mounted version
- Article No. 16557001150
- Box for surface-mounting: 5158533332

### Mechanical with Euro profile half-cylinder

**Program switch**

- 4-position, lockable via Euro profile half-cylinder, white, flush-mounted version
- Article No. 19141801170
- Box for surface-mounting: 19142201170
Pushbuttons

**Pushbutton**

Single-pole changeover contact, standard frame, white, flush-mounted version, System 55

Article No. 19144701170

**Key switches**

**Key switch KT 3-1**

1 NO contact, with Euro profile half-cylinder (may be replaced by any standard Euro profile half-cylinder), key only retractable in neutral position, aluminium, metal, 75 x 75 x 60 mm

KT 3-1, flush-mounted version
Article No. 05054531332

KT 3-1, surface-mounted version
Article No. 05054631332

**ST 32 tamper-proof key switch with LED display**

Silver-coloured aluminium cover with face plate, suitable for flush- and surface-mounting, to lock/unlock the door system from the outside

Approximate dimensions of housing (W x H x D): 75 x 75 x 67 mm

Face plate (flush-mounted): 90 x 100 x 2 mm

Article-No. 56043201

**Large-sized pushbutton (elbow)**

Flush-mounted version/surface-mounted version, electrical, silver-coloured, 304 x 80 mm

Article No. 90410015
Large-sized pushbuttons (elbow)

Large-sized pushbutton
Surface-mounted version, extra-flat design, plastic, grey,
209 x 79 x 17 mm
Article No. 05095431332

Large-sized pushbuttons

Large-sized pushbutton
With box for flush-mounting, without switch pad, incl. switch, 224 x 82 mm
Article No. 05095531332

Large-sized pushbutton
With box for surface-mounting, without switch pad, incl. switch, paint box for surface-mounting (silver-coloured), 224 x 82 x 44 mm
Article No. 05095231332

Switch pad
Stainless-steel, suitable for surface-mounted version/flush-mounted version, 214 x 70 mm
Article No. 05095431332

Switch pad
Stainless-steel, suitable for surface-mounted version/flush-mounted version, 214 x 70 mm, lettering “Tür auf” (German for “open door”)  
Article No. 05095331332
(No picture)

CT 4/1 code keypad as control for locking devices (keypad and electronic module have to be combined)

The code keypad does not require optional software for simple access authorisations. The water resistant metal keypad is also suitable for installation in the exterior of a building. Thanks to Plug&Play, the 4- or 6-digit code may be changed directly with the aid of the keypad. The respective control unit is installed within the security zone and may be connected to all DORMA operators.
Surface-mounted version, 230 V/50 Hz, 1.5 V A, 1 x UM potential-free relay contact 8 A, 250 V, connections: max. 2.5 mm, 75 x 75 x 11.5 mm

MTB 4/1 metal keypad
to enter the activation code (to open the door) and for programming purposes, surface-mounted version
75 x 75 x 11.5 mm
Article No. 05079331332

EB 4/1
Electronic module, incl. 2 m connection cable, plastic cover, black, surface-mounted version
Article No. 05063431332
DORMA BRC remote system

The new DORMA BRC system operates with a bi-directional BidCoS wireless protocol. In contrast to unidirectional systems, the receiver sends a message to the hand-held transmitter that the signal has been received. The hand-held transmitter indicates the prevailing status via a LED. Thus a short keystroke is enough to trigger an opening pulse in a reliable way within the system’s typical field range of 100 meters. The BRC-W and BRC-T transmitters are also of bi-directional design; however, the status indicator is not visible as the transmitters are integrated in pushbuttons.

The new DORMA BRC-R radio receiver may easily be installed inside the operator as its size is adapted to the available space. Simply fix it on the motor-gear-unit with two screws. We offer three different types of transmitters. Up to 1024 transmitters may be allocated to a DORMA BRC-R.

The hand-held transmitter provides two individually allocatable channels. Feedback via integrated LED: orange, red and green. Shock proof design and DORMA keychain.

The battery-operated wall transmitter in 55 mm design is made of white plastic and may easily be adhered to the wall or fixed with screws. It is suitable for light indoor-use.

Battery-operated transmitter, designed for installation into a pushbutton with deep box for flush-mounting or into a surface-mounted large-sized pushbutton. In connection with the DORMA stainless-steel large-sized pushbutton it is also suitable for heavier conditions.
Radar motion detectors

Radar motion detectors respond to movements. They detect approaching people within their detection range and trigger the activation (opening) signal at the door operator. Thanks to their various adjustments, also difficult installations may be realised.

Infrared safety sensors

DORMA infrared safety sensors are active infrared sensors and designed to detect all static and moving obstructions, either people or objects, within their detection range. On the opposite hinge side, the infrared safety sensor fulfils the function of an activator, which means that the sensor will institute the door to reverse and open as soon as an obstruction is detected in the course of a closing cycle. Then the hold-open times starts anew. On the hinge side, the infrared safety sensor will interrupt the automatic movement of the door whenever it detects an obstruction; the door closes on expiry of the adjusted hold-open time. DORMA infrared safety sensors are available in different lengths and may be supplied in the same colour as the operator.

We offer two different types of infrared safety sensors: The DORMA IRS-4, which is required for areas where compliance with DIN 18650 (German Industrial Standard) is essential and the DORMA IRS-2, a moving infrared safety sensor, which is suitable for areas that are not subject to DIN 18650.

IRS-4 active infrared safety sensor

DORMA IRS-4
IRS-4 safety sensors are excelled by their easy commissioning and adjustment. The sensors' monitoring quality within the driving path depends on the condition of the floor in the close range of the door system. IRS-4 sensors are suitable to monitor standard floors and floors with low reflectance levels, gratings or floor mats. The operator and the IRS-4 communicate bidirectionally via the integrated communication interface. The system performs the cyclical sensor test and activates the Energy Saving Mode (ESM) in a fast and reliable way, while the operator automatically assesses its utilisation degree and switches the IRS-4 to Energy Saving Mode as soon as it is not required.

### IRS-2 active infrared safety sensor

**DORMA IRS-2**

With the aid of the DORMA IRS-2, danger spots within the swing path of the door may be safeguarded via moving active infrared safety sensors. The DORMA IRS-2 is available in different lengths and with a variable number of infrared sensors. It furthermore prevents the door leaf from hitting people in the most relevant danger zones.

### Further accessories

**Red-green display**

The red-green display indicates the status of the door system. The extravagant, semicircular designer light indicator is made of acryl, manufactured according to the latest LED technology and equipped with a high-grade LED display (24 V, brilliancy according to DIN VDE 0834, part 1). Its light signals are visible from both sides and the front – even from a large distance.

Light indicator, 24 V DC, LED display (red, green, white).

Article No. 05111631332

**Emergency power supply unit**

In order to provide unlimited safety to all visitors of a building, existing door systems have to remain fully functional even in the event of a power failure. This is achieved with the aid of the DORMA MT 700 USV emergency power supply unit. Depending on the connected accessories, this unit may keep the system operational for up to one hour by providing emergency power supply for the complete door system. Thus there is sufficient time for countermeasures and securing the building.

USV MT 700 V A emergency power supply unit, integrated in 230 V power supply line

Dimensions: 160 x 120 x 360 mm (H x W x D)
